Request for Information (RFI)

RI460-2019-01 for External Engagement for the Assessment of Annual Cancer System Performance Indicators

Please see the answers below regarding any questions raised in relation to this RFI.

1. Question:

How does CPAC define consensus? (reference to the RFI: (“building a consensus-based final set of indicators framed against the context of the Canadian Strategy for Cancer Control”)?

Answer:

As a final step of the indicator refresh process, the Partnership is interested in consulting with a core subgroup of external partners to decide on the final set of new cancer system performance indicators. We are looking for a majority agreement that gets as close as possible to meeting the interests of all the participating partners. Equally important is to make sure external partners feel like their opinion was heard and their input was taken into consideration, even though they may not fully agree with the final set.
